

Interactions with partner networks and activities

NDACC

- I attended the NDACC steering committee and we have strong links through Thierry and Geir
- We have a partner network MoU which is being completed and formalizes the collaboration between the networks.
 - This was circulated in advance. Does anyone have any queries / concerns about this?
 - Enabling agreement (sharing best practices, cross-pollination of steering groups etc)
 - No resource implications beyond those associated with coordination activities

Other networks / activities

- IP refresh recognizes that this was an issue and has some actions to try to remedy for specific organizations / problems
 - GAW for ozone and aerosols
 - BSRN for surface radiation
 - SCOPE-CM / GSICS for satellite comparisons
- WMO asked for representation from four commissions.
 - Two of these remain open seats
- We definitely could / arguably should do more, but what / how?
