

Status of version 3 of the GRUAN RS92 radiosonde data product

Ruud Dirksen,
GRUAN Lead Center
DWD Meteorological Observatory Lindenberg

ICM-7
23 February 2015

<http://radiosondemuseum.org>

Outline

- Introduction
- Software design considerations
- Improved correction: radiation error
- Summary

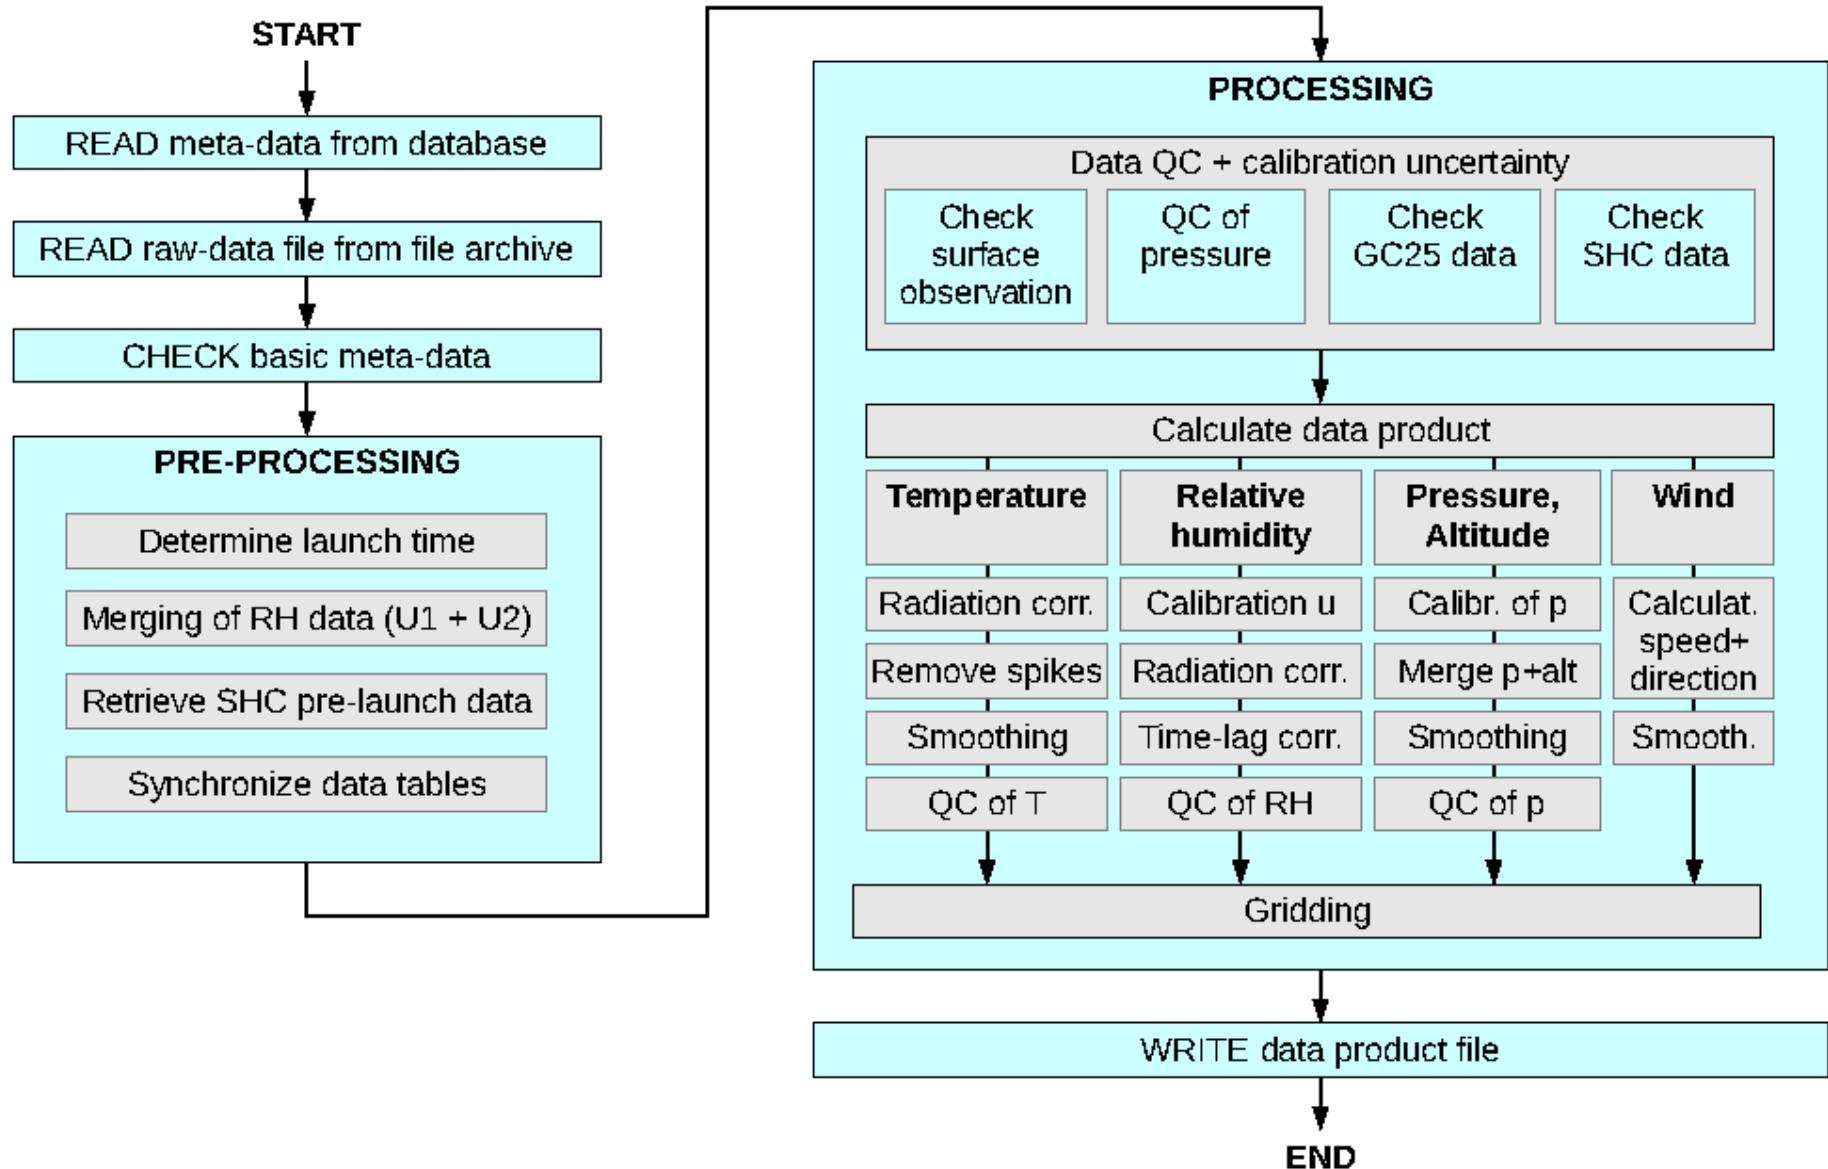

Heritage of GRUAN data processor

- Original design: Franz Immler & Michael Sommer (2008-2011)
- Started from scratch
- Correction algorithms :
 - Based on literature (e.g. time lag, calibration correction)
 - Newly developed (e.g. radiation correction)
- Integration with GRUAN metadata base
- Vertically resolved uncertainty estimates

Version 2: Sept 2012 (Ruud Dirksen & Michael Sommer)

Dirksen et al. AMT 2014 (DOI: 10.5194/amt-7-4463-2014)

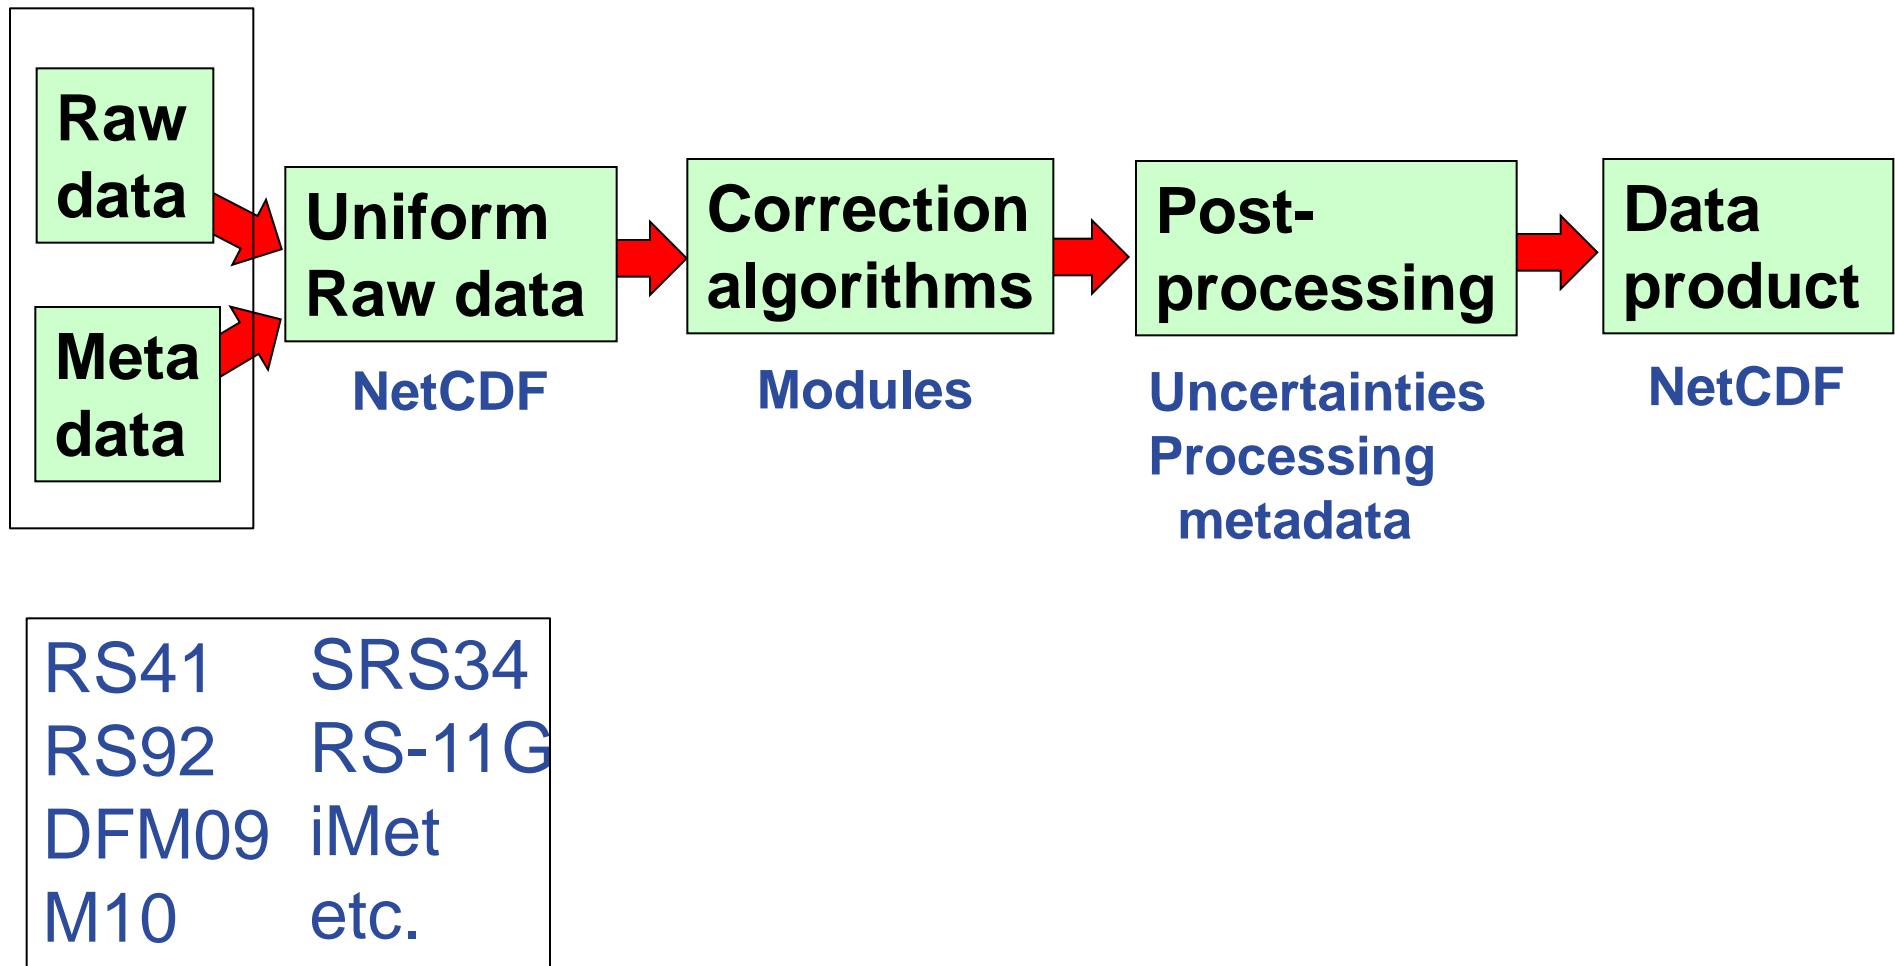

Flow diagram of GDP v2

Motivation for version 3

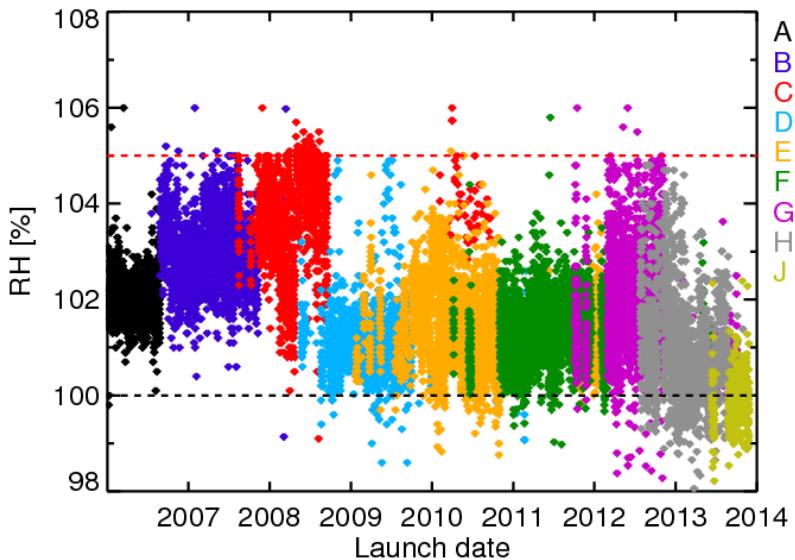

- Restructuring of program code (modular)
- Transition to MW41 receiving systems (.mwx data)
- Improved user feedback (e.g. clear message in case of failed QC)
 - input from site representatives (Hurst/Demoz)
- Generic data processor (digest non-RS92 data)

Dataflow version 3

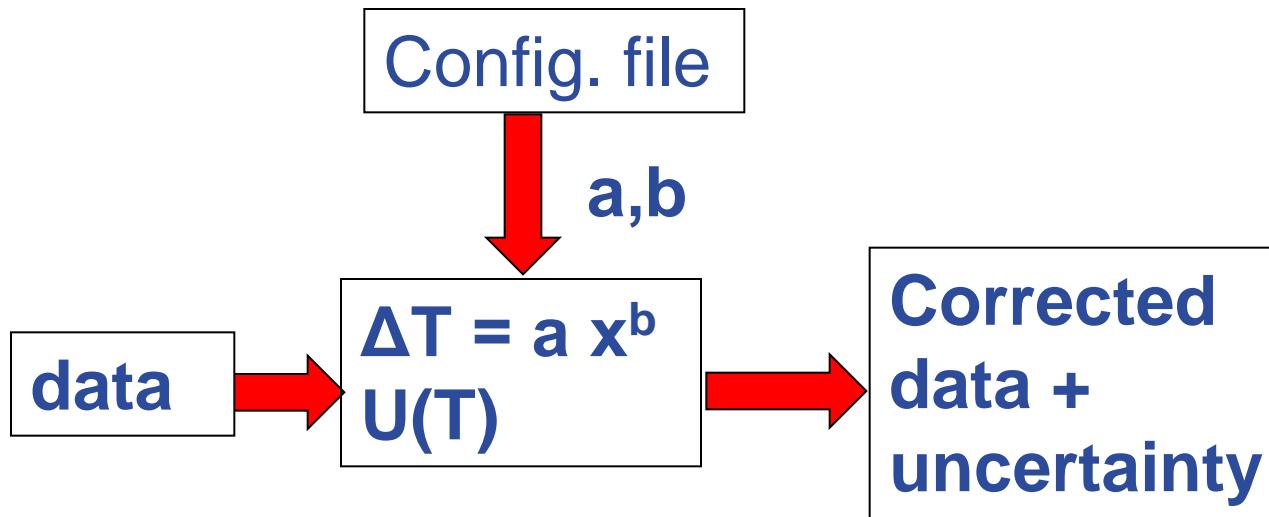

version 3

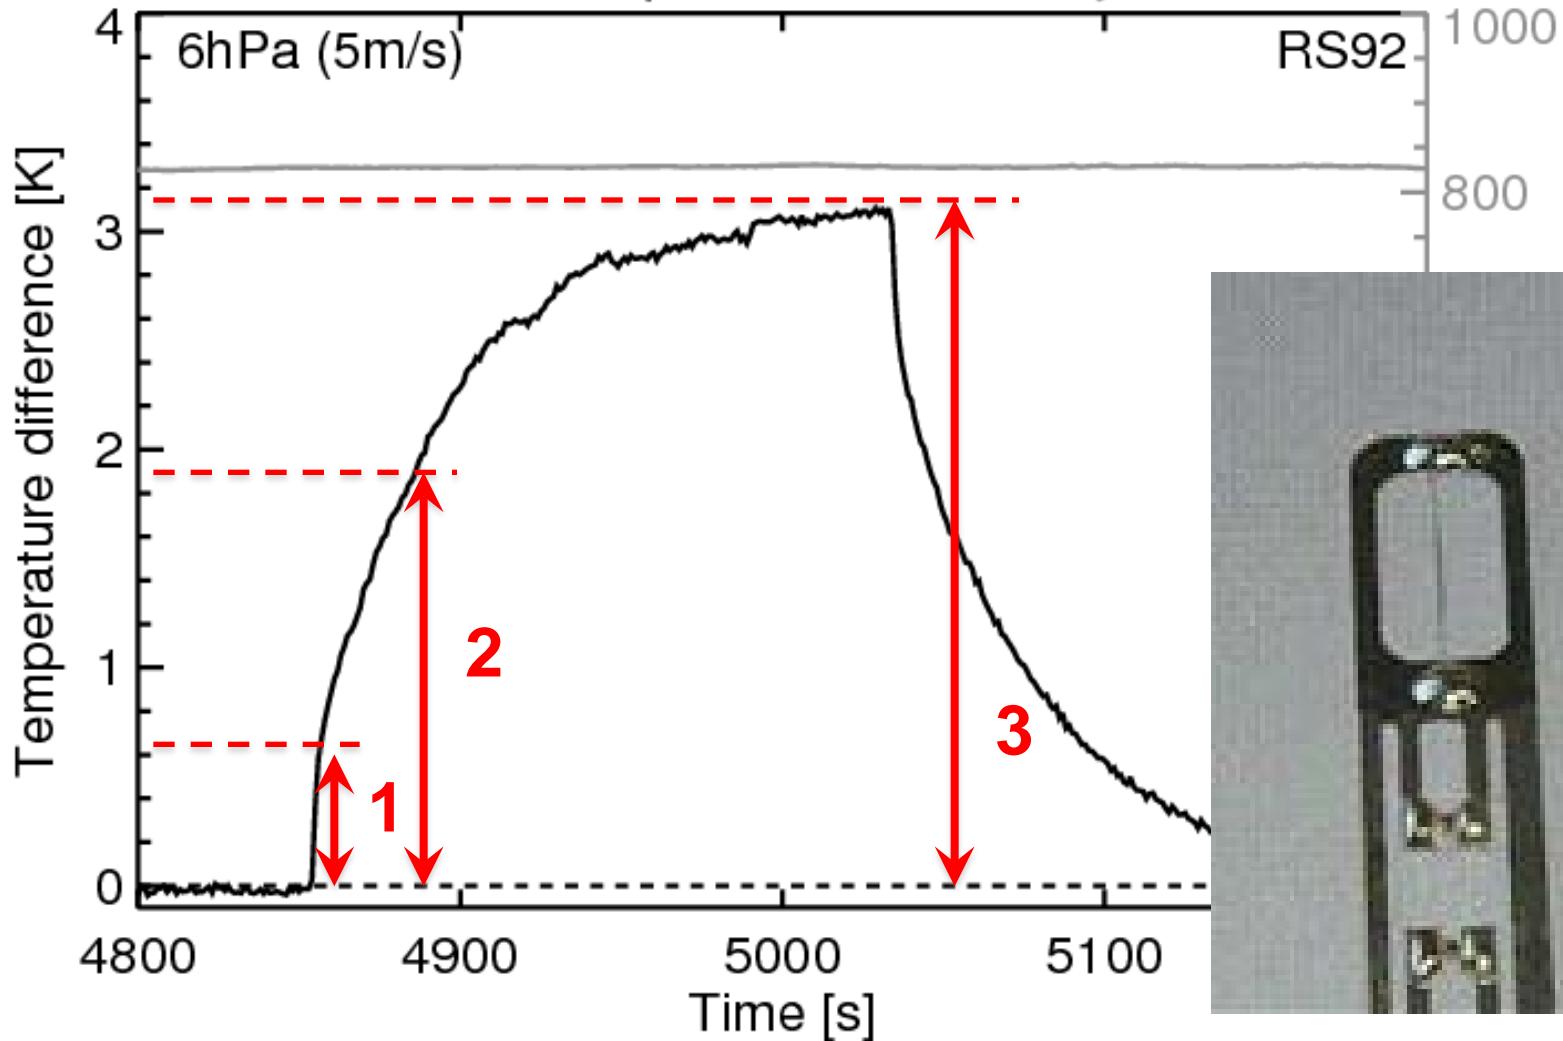

- Dedicated, small modules for each correction (building blocks)
- Program flow controlled by configuration files
- Processing flags
- Processing metadata & improve logging
- Scale humidity profile with SHC ground check (presentation Tuesday morning on network homogeneity)

Example: T correction step

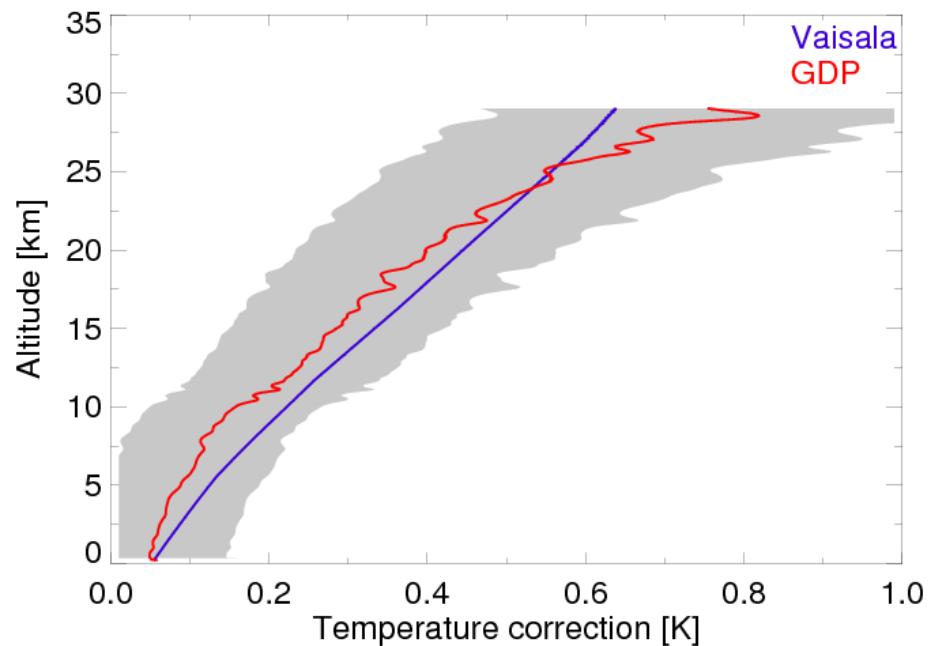

Radiation correction: Sampling moment?

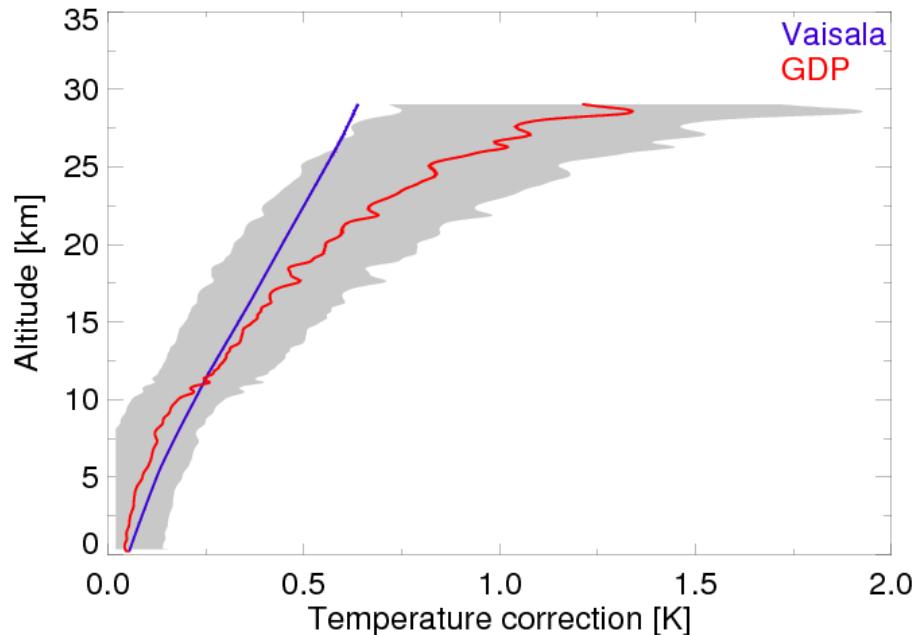

Radiation correction

Full relaxation: Substantial increase of temperature correction in stratosphere

current sampling

“full relaxation”

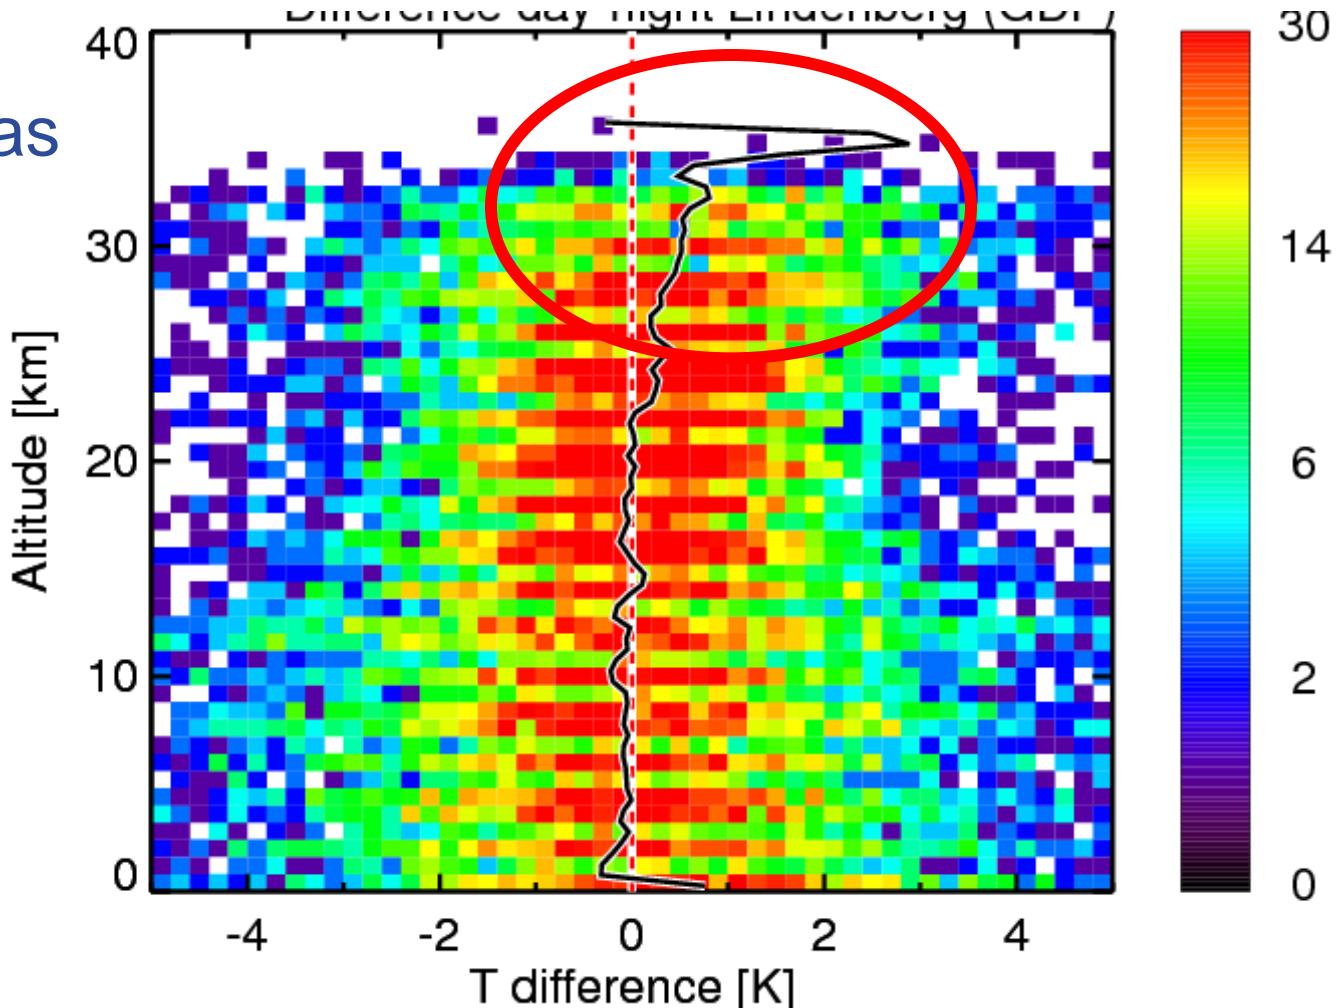

Difference day-night soundings (GDP v2)

Wetter und Klima aus einer Hand

Daytime warm bias
in stratosphere?

GPS-RO
Sun et al. 2013

Summary

- Version 3 available in 2015
- Supports MW41 system (.mwx data format)
- Restructuring of software design (maintenance)
- Generic data processor, can ingest non-RS92 data
- SHC scaling
- Change in radiation error correction
- Improved user feedback, operational/processing issues
