Methodologies

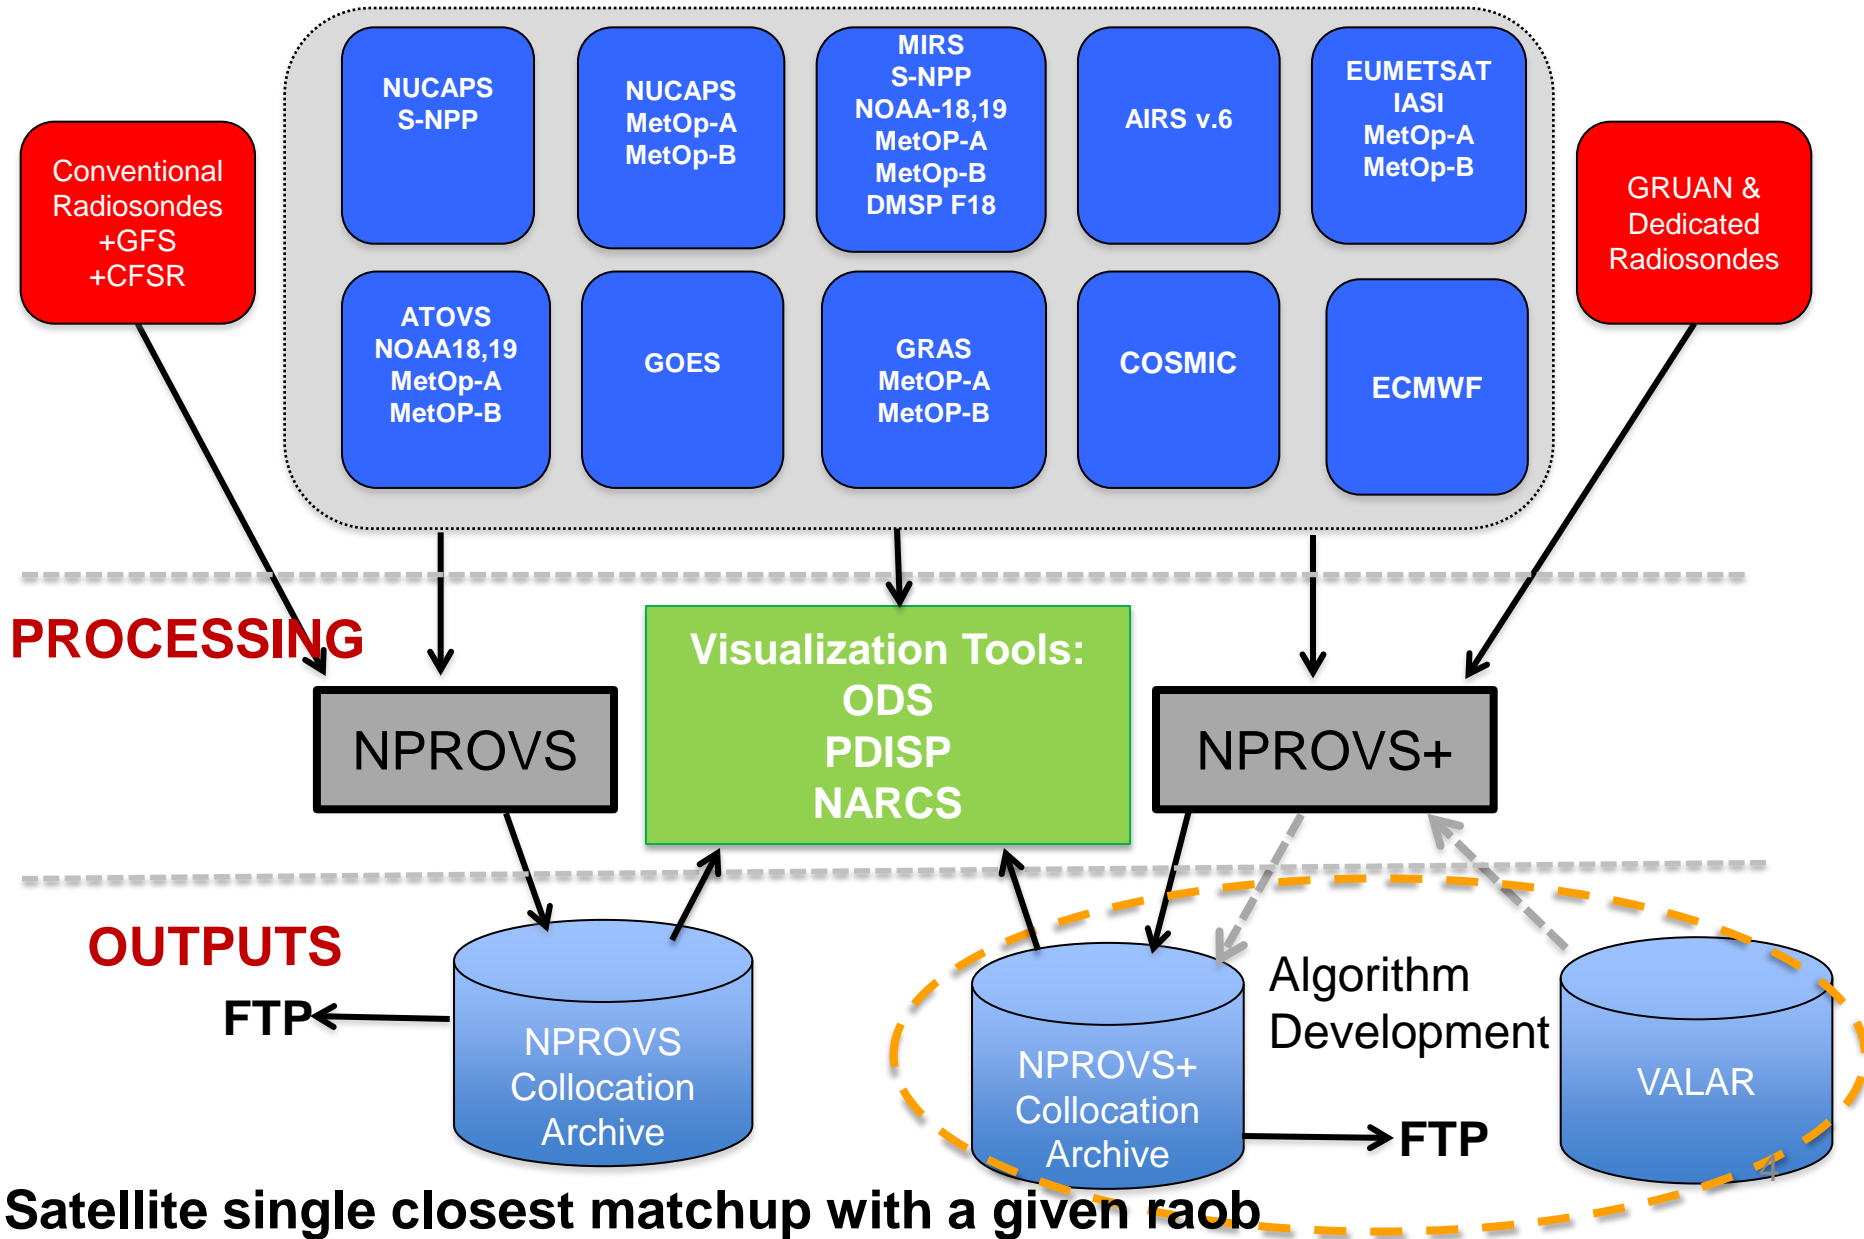

- Use NWP radiation correction (RADCOR) scheme:
 - **Compute RAOB-minus-forecast background (O-B) at different solar angles and heights for all individual sonde types.**
 - Adjust O-B to the nighttime values of the selected reference sonde (e.g., RS92).
- Use GPSRO Tdry as the truth
 - Sun et al. (2013, JGR)

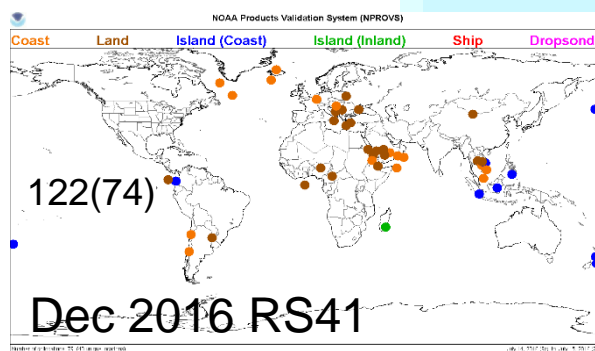

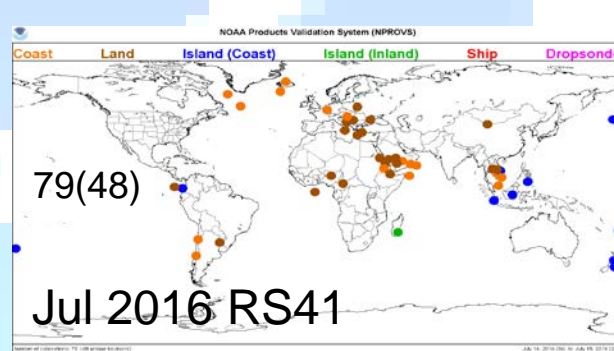

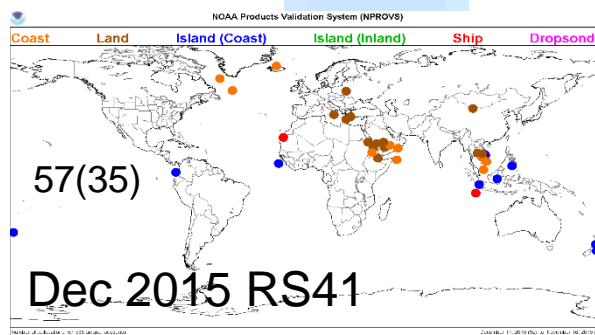

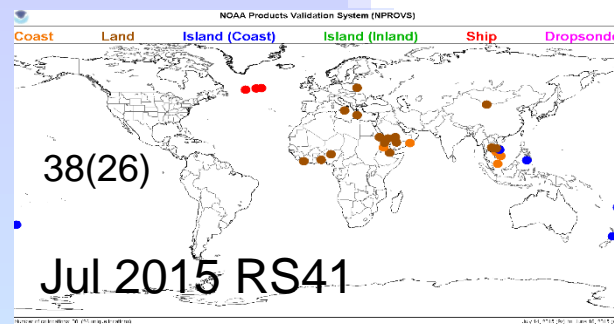

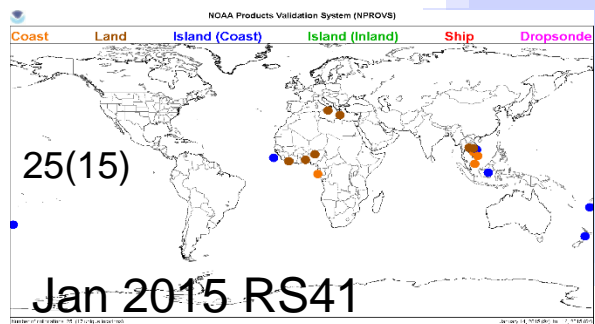

Data (2015-2016)

- Conventional radiosonde data
 - Vaisala RS41 (~44,000) and RS92 (~274,000)
- NWP data (used for O-B)
 - NOAA Climate Forecast System Re-analysis (CFSR) forecast background
- GPSRO Tdry (used as the truth)
 - UCAR COSMIC
 - ROM SAF GRAS
- NOAA Products Validation System (NPROVS)

NOAA Products Validation System: NPROVS and NPROVS+

Conventional RS41 launches

STAR

Center for Satellite Applications and Research

formerly ORA — Office of Research and Applications

RS92-minus-CFSR BG Global

Solar Elevation Categories

- NIGHT (< -7.5 deg)
- DAWN/DUSK ($-7.5 - 7.5$ deg)
- LOW ($7.5 - 22.5$ deg)
- HIGH (> 22.5 deg)

e.g., 12Z BG: 3-hr forecast made at 09Z

STAR

Center for Satellite Applications and Research

formerly ORA — Office of Research and Applications

RS41-minus-CFSR BG Global

Solar Elevation Categories

- NIGHT (< -7.5 deg)
- DAWN/DUSK ($-7.5 - 7.5$ deg)
- LOW ($7.5 - 22.5$ deg)
- HIGH (> 22.5 deg)

e.g., 12Z BG: 3-hr forecast made at 09Z

(RS92-BG) – (RS41-BG)

Solar Elevation Categories

- NIGHT (< -7.5 deg)
- DAWN/DUSK ($-7.5 - 7.5$ deg)
- LOW ($7.5 - 22.5$ deg)
- HIGH (> 22.5 deg)

RS92 -minus- RS41

For 21-32 hPa

Night -0.09 K

High Solar Elevation 0.16 K

For 32-43 hPa

Night -0.11 K

High Solar Elevation 0.11 K

STAR

Center for Satellite Applications and Research

formerly ORA — Office of Research and Applications

RS92-minus-CFSR BG Lindenbug, Germany

Solar Elevation Categories

- NIGHT (< -7.5 deg)
- DAWN/DUSK ($-7.5 - 7.5$ deg)
- LOW ($7.5 - 22.5$ deg)
- HIGH (> 22.5 deg)

10393 (52.21N, 14.12E) 4 times/day, Vaisala RS92

STAR

Center for Satellite Applications and Research

formerly ORA — Office of Research and Applications

Solar Elevation Categories

- NIGHT (< -7.5 deg)
- DAWN/DUSK ($-7.5 - 7.5$ deg)
- LOW ($7.5 - 22.5$ deg)
- HIGH (> 22.5 deg)

RS41-minus-CFSR BG Zagreb/Maksimir, Croatia

14240 (45.82N, 16.03E) 2 times/day, Vaisala RS41

GPS RO Tdry accuracy

- For the UTLS (~10 – 25 km)
 - The accuracy/bias is within 0.1 – 0.2 K averaged from many (e.g., hundreds of) profiles
 - The precision of the individual profile is within 0.5 - 1 K
- For the middle stratosphere and higher (30 – 50 km)
 - The accuracy is 0.5 – 5 K (degrading with altitude)

Chi Ao (JPL, personal communication)

Steiner et al. (2011, Radio Sci)

Hajj et al. (2004, JGR)

Kursinski et al. (1997, JGR)

For Vaisala sondes , Reproducibility: 0.3 – 0.5 K for pressure <100 hPa

COSMIC and GRAS RO

(April 8, 2017)

COSMIC RO profiles: 618

GRAS RO profiles: 1200

STAR

- LOW ($7.5 - 22.5$ deg)
- HIGH (> 22.5 deg)

STAR

Center for Satellite Applications and Research

formerly ORA — Office of Research and Applications

RS41-minus-Tdry GRAS Global (3hr/250km)

Solar Elevation Categories

- NIGHT (< -7.5 deg)
- DAWN/DUSK ($-7.5 - 7.5$ deg)
- LOW ($7.5 - 22.5$ deg)
- HIGH (> 22.5 deg)

Preliminary Results

- Two yrs of global conventional RS41 vs RS92 were analyzed using NWP (CFSR BG and analysis, and ECMWF analysis), and GPS RO Tdry of UCAR COSMIC and ROM SAF GRAS:
- RS41 appears to be less sensitive to solar elevation angle change than RS92.
- The RS92-RS41 difference in the lower stratosphere appears to be within 0.1 - 0.2 K, globally.
- The NWP model data, *i.e.*, CFSR BG and analysis, and ECMWF analysis, are systematically colder (by 0.1-0.5K) than RS92/RS41 in the upper atmosphere (10 -100 hPa).
- Sample size matters when Tdry is used as the reference for RAOB accuracy assessment.
- Use different Tdry products in the RAOB assessment.
